

NEXCELLE

Smart nacelle systems
for tomorrow's world travel

Nexcelle's pioneering work on next-generation integrated propulsion systems will bring additional range, improved availability and optimized operational efficiency for business jets.

In developing the GE Passport 20's nacelle and thrust reverser, Nexcelle shares common technology development processes, operating practices and supply chains with GE Aviation – leveraging our collective strengths to deliver exceptional results.

Nexcelle is a joint venture of GE's Middle River Aircraft Systems and the Safran group's Aircelle, both of which are leading suppliers of engine nacelles, thrust reversers and aerostructures.
